

Service and Repair Group

Motor Service

The Service and Repair Group offers motor repair services for large AC & DC motors and generators, utilizing the same personnel, processes and quality system utilized for our new machines. From basic reconditions, to major redesigns & upgrades, many end-users rely on us for servicing their Westinghouse machines due to our long history and extensive design data for Westinghouse machines. However, many do not realize that they can also get this same level of service for their non-Westinghouse equipment. Using the resources of dedicated service specialists, as well as, our design center engineering staff, we can provide comprehensive solutions to those nagging motor issues and maintenance problems.

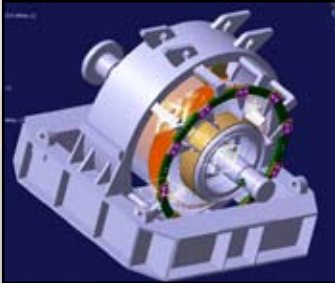

Genuine Westinghouse Renewal Parts

From oil rings to complete rotors, armatures, and stators, we can supply spares and replacement parts that are guaranteed to fit like the original. This is because your new component will be manufactured to the same drawings the part was originally manufactured from. Of course, where possible, parts are updated to reflect design improvements made over the years, ensuring the best possible performance and maintainability of your equipment.

Engineering Services

Would you like to get more horsepower out of your existing motor? Curious if it can be driven by a VFD? Have a nagging maintenance problem that just won't go away? Through an engineering study, we can research these and other questions, and provide you with viable solutions and answers. With a full complement of skilled engineers, we can perform a broad spectrum of analyses, and offer a complete solution that you won't find elsewhere!

Field Service / Factory Technical Support

The Service and Repair Group has you covered from the time the motor leaves our state of the art manufacturing facility. Our highly qualified staff of Field Service Engineers is ready to be dispatched throughout the world to support all of your field needs, and our Technical Support Staff is equipped to answer your questions, with the additional backing of our design center engineering personnel. Whether it be start-up and commissioning, preventative/predictive maintenance, testing, installation and removal assistance, troubleshooting, consulting services, alignments, vibration analysis, dynamic balancing, turnkey projects or training; our engineers are at the ready to tackle your most challenging need.
