

Engineered Systems Solutions

*More than 120 years of Electrical
Engineering Expertise*

A Commitment to Reliability

TECO-Westinghouse is in a unique position of being able to provide quality motors, generators, drives, and power solutions, all from our factory headquarters in Round Rock, Texas. This capability, combined with our global manufacturing resources, uniquely positions us to serve our customers' needs with any application and in any industry. From standalone products such as our VersaBridge® MVD and Modular Heat Recovery System to full-scale system solutions involving Microgrid infrastructure, TWMC offers custom design engineered systems of all scopes and scales.

TWMC also offers power solutions up to 15 kV and 40+ MVA. These solutions can be integrated into existing infrastructure or built from the ground up at a new site. Using TWMC as a turnkey system supplier allows the customer to mitigate risk, simplify the contracts and logistics, and allows for improved deliveries and prices.

Turnkey Scope and Range

TWMC's Engineered System Solutions offers equipment and services to integrate turnkey systems from the power pole and recloser down to fractional HP motors and controls, from 460V to 34.5kV and 1MVA to 50+MVA.

Design Philosophy

Regardless of application, TWMC approaches each system with the mindset of providing the most utility and reliability possible. We pride ourselves in taking a flexible, solution-oriented approach, with a focus on ensuring our customer's needs and expectations are met.

Environmental Ruggedness

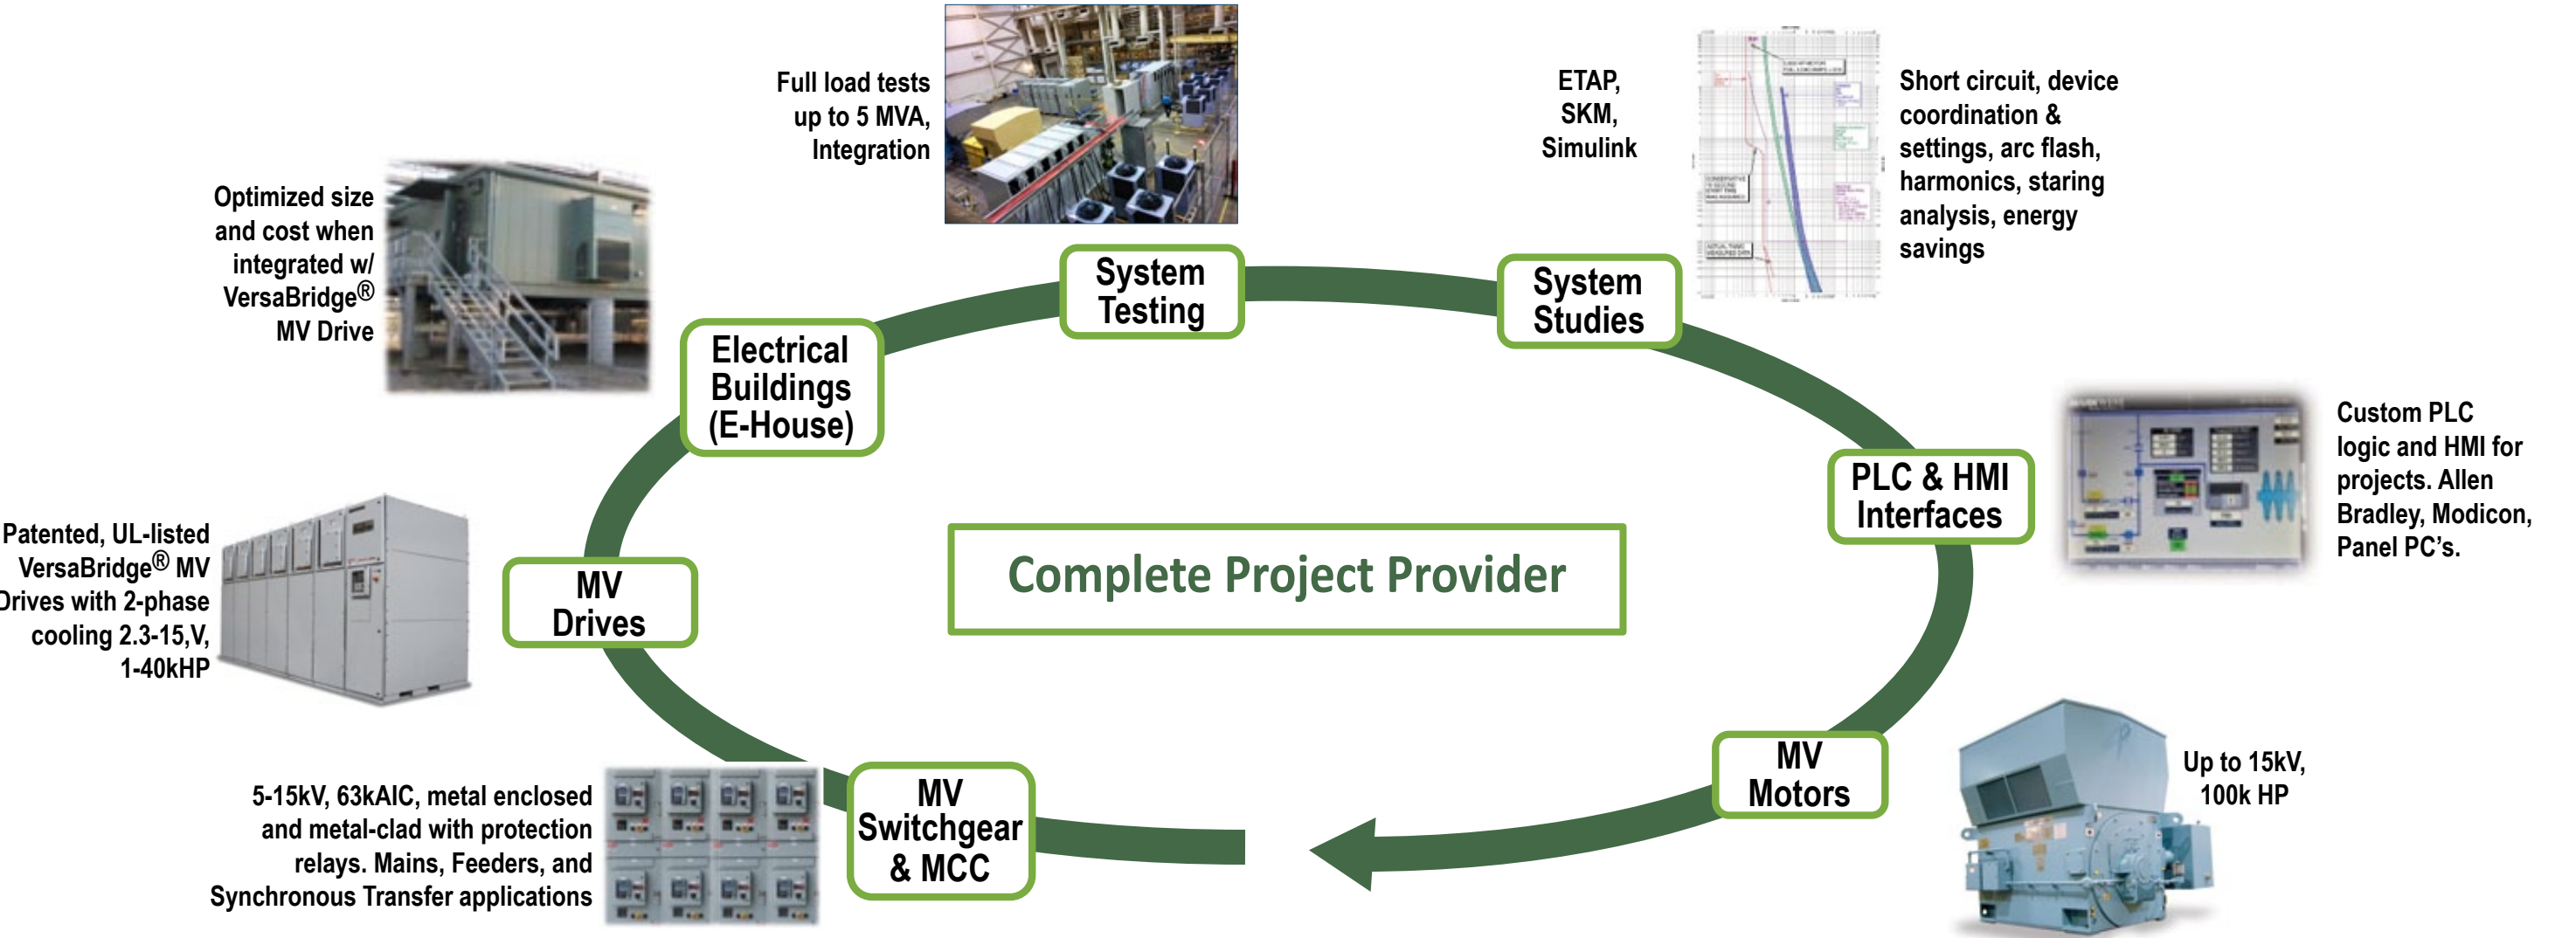

Whether in a chemical plant, lease field or coastal environment, TWMC can provide the appropriate ingress protection and enclosure type for any application and location. Pairing our patented 2-phase cooling system on the VersaBridge MVD, class R global system for transformers and inductors, and proprietary Thermalastic® insulation system on all induction and synchronous motors results in the most reliable and rugged offering to date.

Full Control

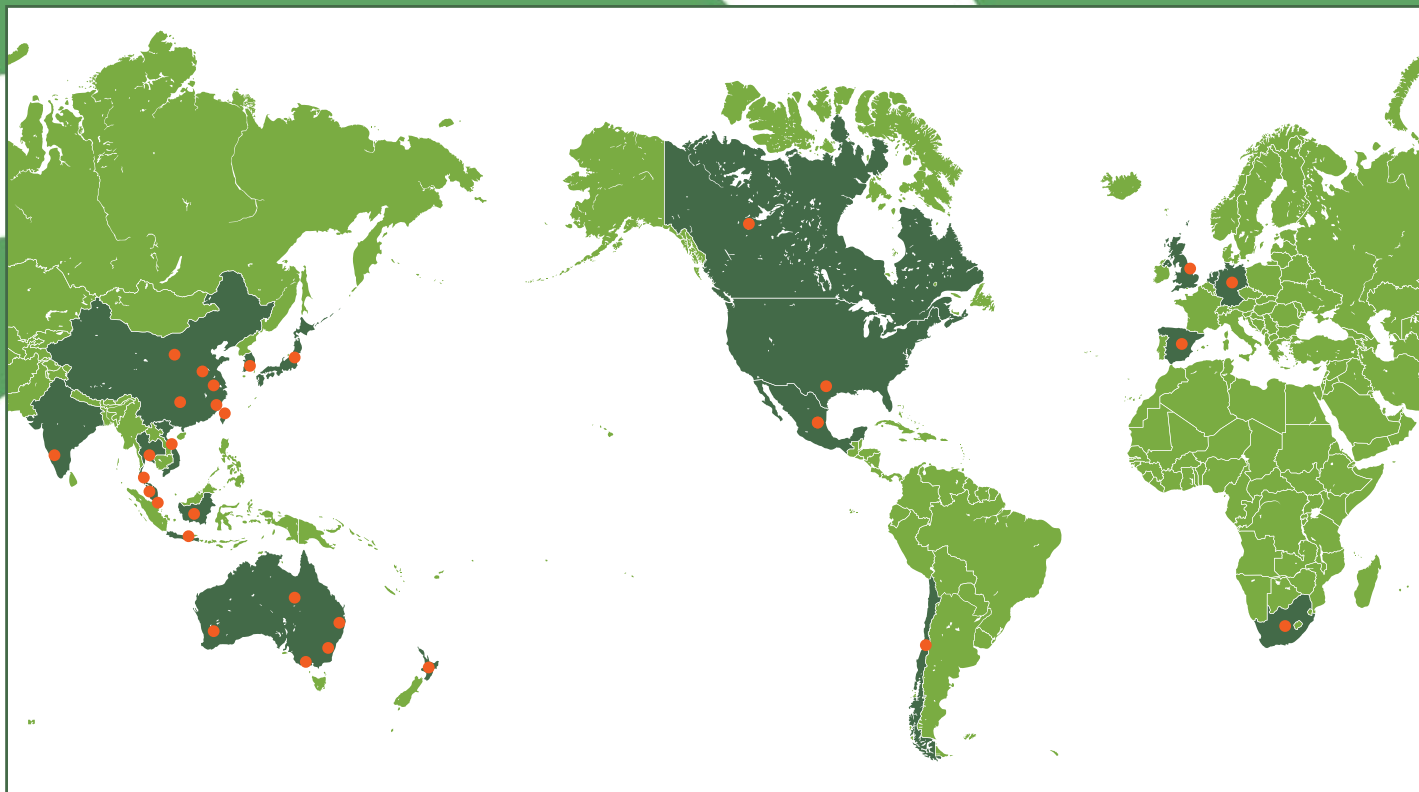

When implementing a synchronous transfer scheme, complex synchronous excitation control, relay coordination, developing custom PLC programs, or other complex system control, TWMC has the capability to do it all.

Bringing it all Together

Existing installation or new build, TWMC can provide integration services within existing or new brick and mortar, E-house, or mobile/modular structures.
